

SICO CAM LOCK PORTABLE DANCE FLOOR

FEATURES

Each 3" x 3" section of Visi Trim provides a modest 11 degree slope and a broad 5" width allowing for easy access to every floor. The gold anodized aluminum trim is highly visible, even in low light situations.

The unique Cam Lock positive locking system allows you to automatically align trim pieces together for a faster and secure fit. A half turn with an allen wrench is all that's necessary to lock and unlock panels.

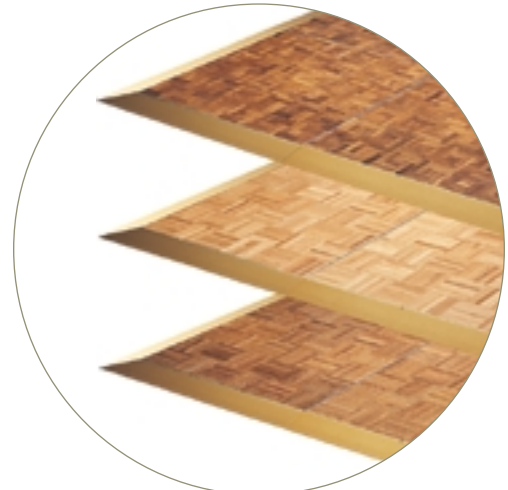

All panels are the same size (3" x 3") allowing for easier and faster assembly.

ADDITIONAL FEATURES

- Cam Lock's reliable positive locking system is not dependant on magnets or gravity to keep panels locked.
- Sico dance floors are used and recommended by more hotels, clubs, and convention centers than any other portable dance floor on the market.
- 100% floor contact eliminates the flexing of panels and parquet from coming loose.
- A high grade parafin wax clearcoat finish on the back of each panel aids in resisting moisture penetration.
- Panels are joined together by utilizing a tongue and groove T-6 aluminum feature strip that protects the wood edges of each panel.
- Serial numbers are given to each panel to provide easy identification.
- Take advantage of the free space analysis drawing that will provide you with the appropriate number of dance floors and dance floor accessories.

The Natural Oak(top) and Heritage Oak(middle) floors are protected with an ultraviolet-cured finish giving each floor a high gloss appearance. The Thailand Teak(bottom) floor retains its beauty as a result of its oil-based properties.
